

Initial configuration

```
TRAINING_CONFIG = {
    "num_episodes": 3000,
    "timesteps_per_episode": 50,
    "T_horizon": 64,
    "sma_window_size": 100,
    "random" : True,
    "hero_starting_pos": [1, 1],
    "villain_starting_pos": [7, 7],
    "step_penalty": -0.1,
    "win_reward": +5,
    "lose_reward": -5,
}

PPO_CONFIG_Hero = {
    "state_dim": 4,
    "action_dim": 4,
    "hidden_dim": 256,
    "lr": 0.0005,
    "gamma": 0.98,
    "lmbda": 0.95,
    "eps_clip": 0.1,
    "K_epoch": 3,
}

PPO_CONFIG_Villan = {
    "state_dim": 4,
    "action_dim": 4,
    "hidden_dim": 256,
    "lr": 0.0005,
    "gamma": 0.98,
    "lmbda": 0.95,
    "eps_clip": 0.1,
    "K_epoch": 3,
}
```

Keep the above configuration as reference, and only change the below given parameters.

Do not forget to add experiment number while running the code.

Make the changes in ppo_config file. And then run the train_ppo file
